DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9 and 15-20, drawn to an enamel composition and plasma display panel comprising the enamel composition, classified in class 313, subclass 587.
- II. Claims 10-12, drawn to a method of improving the wettability of white pigments, classified in class 106, subclass 312.
- III. Claims 13-14, drawn to a process for enameling a glass substrate, classified in class 428, subclass 210.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process as claimed can be used to make other and materially different product, for instance the method of improving the wettability can be applied to a broad selection of pigments or solid particles to increase the ability of the particle to be wetted when in contact with a liquid, furthermore, the method can be use for compositions, e.g. glaze, paint, not particular to an enamel composition.

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP

Art Unit: 2879

§ 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product, for instance the enamel composition can be applied to any surface, not exclusively a glass substrate, using an alternative adequate medium, such as a paste, and under different temperatures and time intervals as than those claimed.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated since they are not disclosed as capable of use together since the method of improving the wettability of white pigments of Group II have different modes of operation, different functions, or different effects than the process for enamelling a glass substrate of Group III.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, further, the search required for Group I is not required for Group II or III, and because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
